KEYMACRO is an affordable plug-in, designed to generate sequential macro codes in MS Outlook 2003/2007. When pre-defined macros are created, they can then be used for any operations like, creating a new folder, renaming a file, copying or deleting a file etc. Features: Highly customizable code creation by programming your own macro with any VB6, C#, VB.NET, JScript, Visual Basic.NET or VBA code, as well as setting data type, formatting, length etc. The code creation process is really easy and can be done even if you are not familiar with programming. With this application, it is possible to save your own codes, so you can use them later. Generate a batch of codes with a click, and print them all at once. It provides you with a high level of user-friendly functionality. Multiple programming languages support Support for Windows 2000, 2003, Vista, 7, 8 and later.
