Receives keyboard input and passes it to your programs as standardized keystrokes or key combos. KEYMACRO takes input from standard keyboards, text editors, paint programs, and other applications. It can receive keystrokes and act on them, recording them in a clipboard. You can apply actions to the keystrokes and perform other processing of the keystrokes using different "macros". What's new in this release: Bugs fixed in this release:- Corrected the DateFormat property.- The DateFormat property now supports Date property.- Configurable list/decimal separator settings.- The NumberFormat property now supports Currency property.- The Currency property now supports Number property.- Fixed in this release: Improved startup performance.- Fixed in this release: Keyboard freezing during macro recording.- Fixed in this release: Clipboard recording of KeyStroke objects.- Fixed in this release: "Include trailing whitespace" setting for importing shapefiles.- Fixed in this release: Exports UTF-8/16 instead of UCS2.- Fixed in this release: Subsequent imports of already

imported shapes are no longer forced to read shapes from disk. -------------------- How to run You can get KEYMACRO from this web site and then install it as an add-on to Microsoft Office. If you have another text editor you prefer (like notepad) you can install KEYMACRO there, too. If you don't have any version of Microsoft Office available then you can install KEYMACRO in your home directory. In this case it has to be loaded each time you start a text editor. How to use 1. Install the add-on for Microsoft Office. 2. Open Microsoft Office and choose "Open" or "File" and then choose the add-on you installed. 3. In your text editor, start a macro recording. 4. Start another application you want to use with KEYMACRO, set it up to read from the clipboard, and start using it. 5. When you finish using KEYMACRO, stop recording your macro. 6. In Microsoft Office, save the macro and you are done. 7. If you want to repeat the macro (ie if you want to edit your macro and re-record it), just open Microsoft Office and choose "Open" or "File" and then choose the macro you saved. 8. Note: The keyboard command for editing your macro 77a5ca646e

GPS Utility Import File Converter is an advanced software utility that enables you to convert GPS data into files with the.txt or.csv format and ready them for GPS Utility. It comes loaded with a bunch of options and configuration properties that mostly target experienced users. Setting up this tool is an uncomplicated task that's over in just a few seconds. At launch, it brings up a classical-looking panel with a seemingly cluttered structure that represents GPS Utility Import File Converter's interface. Customize the GPS conversion mode You can begin by selecting the output type between waypoints, waypoints and routes, or trackpoints. It's possible to edit settings regarding IDs, comments, the grid type, first and last record, coordinate format, along with the easting and northing alignment. What's more, you can break lines, preview information in the main application window before converting files, as well as set the format for the date and time, along with the list and decimal separators. These are just part of the configurable settings provided by this program. They can be saved to.ini files and imported later or on another computer running GPS Utility Import File Converter. Evaluation and conclusion We haven't come across any stability issues in our tests, thanks to the fact that the app didn't hang, crash or prompt error messages. It had a good response time and finished conversion jobs rapidly while remaining light on computer performance, running low CPU and RAM. On the other hand, GPS Utility Import File Converter isn't that intuitive for inexperienced users. Otherwise, it sports practical options and methods of app customization to turn GPS-formatted files into more user-friendly types.
